

OVERVIEW

This high-conviction strategy seeks to outperform the S&P Global Infrastructure Index over a full market cycle by investing in companies that exhibit above-average levels of free cash-flow growth.

High Conviction

Invests in companies that stand to benefit from enduring socioeconomic trends of urbanization, modernization, and asset revitalization.

Bottom-Up Stock Selection

Focuses on identifying underappreciated companies with above-average levels of cash-flow growth potential and strategically located infrastructure assets.

Alpha Generation Potential

Utilizes a broader investment universe to balance “pure-play” and “core” with opportunistic styles.

INVESTMENT TEAM

Portfolio Managers

- Bobby Edemeka
- Shaun Hong, CFA
- Brannon P. Cook

4 Research Analysts

Average Experience

- 23 years industry experience
- 13 years at Jennison

CLIENT PORTFOLIO MANAGERS

- 406 employees
- Locations in New York and Boston
- Prudential subsidiary since 1985

For Professional Investors only. All investments involve risk, including the possible loss of capital. Not for use with the public. Not for redistribution.

DISCLOSURES

All non performance portfolio data provided is based on a representative Jennison Global Infrastructure portfolio. The representative portfolio was selected because it is in the composite and we believe the holdings, characteristics and risk profile are representative of the strategy. Unless otherwise indicated, the Jennison strategy characteristics relate to that of an investment composite or a representative account managed within a composite. It is intended to provide a general illustration of the investment strategy and considerations used by Jennison in managing that strategy during normal market conditions. Individual accounts may differ from the reference data shown due to varying account restrictions, fees and expenses, and since inception periods, among others.

Due to rounding, individual values may not sum to total shown.

Certain third party information in this document has been obtained from sources that Jennison believes to be reliable as of the date presented; however, Jennison cannot guarantee the accuracy of such information, assure its completeness, or warrant such information will not be changed. Jennison has no obligation to update any or all such third party information. Any references to third party trademarks and data are proprietary and confidential and cannot be redistributed without Jennison's prior consent.

Jennison uses the Global Industry Classification Standard (GICS®) for categorizing companies into sectors and industries. GICS® is used for all portfolio characteristics involving sector and industry data such as benchmark, active and relative weights and attribution. The Global Industry Classification Standard (GICS®) is the exclusive intellectual property of MSCI Inc. (MSCI) and Standard & Poor's Financial Services, LLC (S&P). Neither MSCI, S&P, their affiliates, nor any of their third party providers ("GICS Parties") makes any representations or warranties, express or implied, with respect to GICS or the results to be obtained by the use thereof, and expressly disclaim all warranties, including warranties of accuracy, completeness, merchantability and fitness for a particular purpose. The GICS Parties shall not have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of such damages.

Upside Capture is a statistical measure of an investment manager's overall performance in up-markets. Upside capture is calculated by taking the portfolio's daily return during periods when the benchmark had a positive return and dividing it by the benchmark return. **Downside Capture** is a statistical measure of an investment manager's overall performance in down-markets. Downside capture ratios is calculated by taking the portfolio's daily return during the periods of negative benchmark performance and dividing it by the benchmark return. **Sharpe Ratio** is the measure of risk adjusted returns. It is a risk-adjusted measure developed by Professor William F. Sharpe, which measures reward per unit of risk. The higher the Sharpe Ratio, the better. The numerator is the difference between the composite's annualized return and the annualized return of the risk-free instrument (T-Bills). The denominator is the composite's annualized standard deviation. It is the performance of the composite less the performance of the risk-free instrument divided by the standard deviation of the composite. **Tracking Error** is the standard deviation of the difference in monthly returns between the composite and the market index. **Beta** is used to measure the volatility of a manager relative to the chosen risk market index. **Standard Deviation** is the measure of dispersion based on monthly returns for the composite or index.

There is no assurance that any securities discussed herein will remain in an account's portfolio or that securities sold have not been repurchased. It should not be assumed that any of the securities transactions or holdings discussed were or will prove to be profitable. The securities discussed may represent only a small percentage of an account's portfolio holdings. Please note that certain securities of foreign issuers may be held as ADRs. Additionally, different classes of securities from the same issuer may be combined for illustrative purposes.

Performance results fluctuate, and there can be no assurances that objectives will be achieved. Performance results are calculated in US dollars and reflect reinvestment of dividends and other earnings. Gross of fee performance is presented before custodial and Jennison's actual advisory fees but after transaction costs. Net of fee performance is presented net of Jennison's actual advisory fees and transactions costs. Returns are gross of reclaimable withholding taxes, if any, and net of non-reclaimable withholding taxes. Actual advisory fees charged and actual account minimum size may vary by account due to various conditions described in Jennison Associates LLC's Form ADV.

Due to rounding, calculations based on the returns provided may not result exactly in Excess Returns shown. **Excess Return** is the additional return generated by the composite relative to the market index.
